

Reduce the Environmental Impact of Your Travel for the Conference

Have you ever considered offsetting the carbon released into the atmosphere by your travel to and attendance at conferences and/or on tours?

Most of the members of the Educational Travel Community come from organizations that have sustainability goals, but we know that your “To Do” lists are long, and it is a challenge to find the time to implement all your goals.

We thought we'd make it easier by providing the following three organizations for you to consider for carbon offsets – each contains a carbon calculator which will ask a few questions and estimate the carbon produced by your attendance, as well as offering options for different projects which you can support for nominal cost to offset that carbon.

1. [South Pole Group](#)
2. [Carbon Fund](#)
3. [Climate Care](#)

Many options exist in the marketplace - feel free to assess and choose whichever one you deem best for your travel.

There are many options available to calculate your footprint:

- Flights
- Mobility (transportation)
- Energy
- Events
- Overnight
- Tons CO₂

Once you have calculated your carbon footprint, you can choose an emission reduction project.
